Occupational Bite Prevention Training

Dogs bite nearly 2% of the US population... more than 4.5 billion people annually. - *Center For Disease Control (CDC) Statistics*

Rick Comstock, owner and trainer of Pets For Protection, has 30 years experience training dogs in a variety of applications. Rick has worked with thousands of dogs and their owners in thousands of environments.

Rick has trained sentry and patrol dogs, sporting dogs and family dogs to bring out their best and develop the human-dog interaction and relationship for a safe rewarding experience.

All adults should learn appropriate behaviors around dogs so that they can protect themselves, teach their own children, serve as an example for others, and reinforce appropriate behaviors in other children at every opportunity. Adults also serve as local eyes for animal control so that roaming dogs are controlled.. -*Vet Med Today: Canine Aggression Task Force*

Approximately 334,000 people are admitted to US emergency departments annually with dog bite associated injuries and another 466,000 are seen in other medical settings. - *Center For Disease Control (CDC) Statistics*

PETS FOR PROTECTION

Training for you and your dog.

PETS FOR PROTECTION
Training for you and your dog.

“Dogs have shared their lives with humans for more than 12,000 years, and that coexistence has contributed substantially to humans’ quality of life” but “dog bites are a serious public health problem that inflicts considerable physical and emotional damage on victims and incurs immeasurable hidden costs in communities.” -*Vet Med Today: Canine Aggression Task Force*

Pets For Protection offers **Hands-On Training** that includes:

- How to handle On and Off leash bites
- Recognizing Bite Scenarios
- Techniques in dealing with aggressive dogs and how to apply them

The **Pets For Protection Bite Prevention Training Program** provides three hours of classroom time devoted to:

- Safety and Education
- Consequences of dog bites
- Neutrality training
- Potentially dangerous behavior types
- Potentially dangerous breeds
- Owner handled dogs
- Site evaluation
- Defense techniques
- Life and death take-out methods

The Task Force on Canine Aggression and Human-Canine Interactions “believe a well-planned proactive community approach can make a substantial impact” to reduce dog bites. (-*Vet Med Today: Canine Aggression Task Force*).

Proper training on bite prevention is part of that responsible approach.

Dog attack victims in the US suffer over \$1 billion in monetary losses every year -*State Farm Times, 1998.*

Pets for Protection combines classroom training and hands-on experience to help attendees successfully develop the skills to prevent dog attacks and serious injury.
